Art Unit: 1634

Claims 1-14 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on April 22, 2008.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 15-19 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Southern et al (U.S. Patent No. 6,307,039). Southern et al teaches the use of replicate sequences of oligonucleotide sequences contained in VNTR (Variable Number Tandem Repeat) sequences in arrays (*e.g.*, see column 5, line 47 through column 7, line 4; column 10, line 40 through column 11, line 20; and claims 1-6). Thus, the arrays of Southern et al are embraced by the instant claims.

Claims 20, 21, and 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Southern et al (U.S. Patent No. 6,307,039). in view of Houthoff et al (U.S. Patent No. 6,133, 038). The discussion of Southern et al above is incorporated here. Houthoff et al teaches the use of platinum compounds as labels in nucleic acid molecular hybridization assays (*e.g.*, Abstract, column 2, line 30 through column 8, line 5, column 8, line 24 through column 10, line 50, and claims 1-7) and the collection of materials for performing assays into kits for convenience (*e.g.*, column 2, lines 29-40, column 4, line 65 through column 7, line 67, and claims 1-4). It would have been obvious for one of ordinary skill in the art at the time the invention was made to use the platinum compounds of Houthoff et al in the microarray assays of Dale et al for the expected result of detection of hybridized nucleic acids. It would further have been obvious to collect all of the materials needed to perform such assays into kit from for convenience as taught by Houthoff et al.
